# Soda Ash

**Specialty Chemical**

**Description** Soda Ash is a white, granular powder primarily used to condition and soften make-up water and raise pH

---

**Applications/Functions**

- Treat out hardness due to calcium in make-up water
- Raise pH

---

**Advantages**

- Eliminate calcium ions by removing them as insoluble calcium carbonate
- Maximize the performance of bentonite and polymer product

---

**Typical Properties**

• Appearance	Variable-colored powder (gray to tan)
• pH of 5% solution	11.5
• Bulk density, lb/ft <sup>3</sup>	57-65

---

**Recommended Treatment**

- Hardness and pH levels of make-up water should be checked prior to addition of Soda Ash.
- Addition of Soda Ash should always be done prior to addition of bentonite or polymer to the fluid system.
- Soda Ash should not be added at the same time as other drilling fluid components.
- When treating make-up water pH ranges should be maintained between 8.5 – 9.5

**General Treatment:**

- 1-2 pounds per 100 gallons of make-up water or 1.2-2.4 kilograms per cubic meter of make-up water.
  - Use as required to remove calcium ions but do not add in excess as overtreatment can lead to detrimental effects and reduced performance of the drilling fluid components and/or system.
  - Mix slowly through a jet mixer or sift slowly into the vortex of a high-speed stirrer.
-

**Packaging** Soda Ash is packaged in 50-lb (22.7 kg) or 100-lb (45.4 kg) multiwall paper bags.

---

**Availability** Soda Ash can be purchased through any Baroid Industrial Drilling Products Distributor. To locate the Baroid IDP distributor nearest you contact the Customer Service Department in Houston or your area IDP Sales Representative.

## SECTION 11: Toxicological information

### 11.1 Information on toxicological effects

Classification according to GHS (1272/2008/EC, CLP)

This substance does not meet the criteria for classification in accordance with Regulation No 1272/2008/EC.  
This mixture does not meet the criteria for classification in accordance with Regulation No 1272/2008/EC.

Acute toxicity

Shall not be classified as acutely toxic.

Exposure route	Endpoint	Value	Species	Method	Notes
oral	LD50	>20000 mg/kg	rat		

Skin corrosion/irritation

Shall not be classified as corrosive/irritant to skin. Bentonite is not irritating to skin (in vivo, OECD 404, rabbit).

Serious eye damage/eye irritation

Shall not be classified as seriously damaging to the eye or eye irritant. Bentonite is not irritating to eye (in vivo, OECD 405, rabbit). Bentonite is classified as a mild irritant to eyes (according to the modified Kay & Calandra criteria).

Respiratory or skin sensitisation

Shall not be classified as a respiratory or skin sensitiser. Bentonite is not a skin sensitiser in accordance with the local lymph node assay (OECD 429, mouse).

Summary of evaluation of the CMR properties

Shall not be classified as germ cell mutagenic, carcinogenic nor as a reproductive toxicant.

- The classification as germ cell mutagenic is based on

In vitro tests (OECD 471, 473 and 476) negative.

- The classification as carcinogenic is based on

In 1997, IARC (the International Agency for Research on Cancer) concluded that crystalline silica inhaled from occupational sources can cause lung cancer in humans. However it pointed out that not all industrial circumstances, nor all crystalline silica types, were to be incriminated. (IARC Monographs on the evaluation of the carcinogenic risks of chemicals to humans, Silica, silicates dust and organic fibres, 1997, Vol. 68, IARC, Lyon, France.)

In June 2003, SCOEL (the EU Scientific Committee on Occupational Exposure Limits) concluded that the main effect in humans of the inhalation of respirable crystalline silica dust is silicosis. "There is sufficient information to conclude that the relative risk of lung cancer is increased in persons with silicosis (and, apparently, not in employees without silicosis exposed to silica dust in quarries and in the ceramic industry). Therefore preventing the onset of silicosis will also reduce the cancer risk..." (SCOEL SUM Doc 94-final, June 2003).

So there is a body of evidence supporting the fact that increased cancer risk would be limited to people already suffering from silicosis. Worker protection against silicosis should be assured by respecting the existing regulatory occupational exposure limits and implementing additional risk management measures where required (see section 16 below).

## Section 3 - HAZARD IDENTIFICATION

### Potential Health Effects

#### **Relevant Routes of Exposure:**

Eye contact, skin contact, inhalation, and ingestion.

#### **Effects Resulting from Eye Contact:**

Exposure to airborne dust may cause immediate or delayed irritation or inflammation. Eye contact by large amounts of dry powder or splashes of wet gypsum dust may cause eye irritation. Such exposures may require immediate first aid (see Section 4) and medical attention to prevent damage to the eye.

#### **Effects Resulting from Skin Contact:**

Direct contact may cause irritation by mechanical abrasion.

#### **Effects Resulting from Inhalation:**

Gypsum may contain trace amounts of free crystalline silica. Prolonged exposure to respirable free silica can aggravate other lung conditions and cause silicosis, a disabling and potentially fatal lung disease.

Exposure to gypsum dust may cause irritation to the moist mucous membranes of the nose, throat, and upper respiratory system. It may also leave unpleasant deposits in the nose.

#### **Effects Resulting from Ingestion:**

Although small quantities of dust are not known to be harmful, ill effects are possible if larger quantities are consumed.

#### **Carcinogenic potential:**

Limestone is **not** listed as a carcinogen by NTP, OSHA, or IARC. It may however, contain trace amounts of substances listed as carcinogens by these organizations.

Crystalline silica, which is a component of limestone, is now classified by IARC as known human carcinogen (Group I). NTP has characterized respirable silica as "reasonably anticipated to be [a] carcinogen".

#### **Medical conditions which may be aggravated by, inhalation or dermal exposure:**

Pre-existing upper respiratory and lung diseases.

---

#### Section 4 - FIRST AID

##### Eyes

Immediately flush eyes thoroughly with water. Continue flushing eye for at least 15 minutes, including under lids, to remove all particles. Call physician if irritation persists or later develops.

##### Skin

Wash skin with cool water and pH-neutral soap or a mild detergent. Seek medical treatment if irritation persists or later develops.

##### Inhalation of Airborne Dust

Remove to fresh air. Seek medical help if coughing and other symptoms do not subside.

##### Ingestion

Do not induce vomiting. If conscious, have the victim drink plenty of water and call a physician immediately.

---

#### Section 5 - FIRE AND EXPLOSION DATA

Flash point .....	None	Lower Explosive Limit.....	None
Upper Explosive Limit.....	None	Auto ignition temperature.....	Not Combustible
Extinguishing media.....	Not Combustible	Special fire fighting Procedures.....	None
Hazardous combustion products..	None	Unusual fire and explosion hazards.....	None

---

#### Section 6 - ACCIDENTAL RELEASE MEASURES

Collect dry material using a scoop. **Avoid actions that cause dust to become airborne.** Avoid inhalation of dust and contact with skin. Wetting of spilled materials may be beneficial to minimize generation of airborne dusts.

None of the components of this product are subject to the reporting requirements of Title III of SARA 1986, and 40 CFR 372.

---

#### Section 7 - HANDLING AND STORAGE

Follow the personal protection and controls set forth in Section 8 of this MSDS when handling this product. Respirable crystalline silica-containing dust may be generated during processing, handling and storage.

---

#### Section 8 - EXPOSURE CONTROLS/PERSONAL PROTECTION

##### Skin Protection

Wash dust-exposed skin with soap and water before eating, drinking, smoking, and using the toilet facilities. Wash work cloths after each use.

##### Respiratory Protection

Avoid actions that cause dust to become airborne. Use local or general exhaust ventilation to control exposures below applicable exposure limits.

Use NIOSH/MSHA approved (under 30 CFR 11) or NIOSH approved (under 42 CFR 84) respirators in poorly ventilated areas, if an applicable exposure limit is exceeded, or when dust causes discomfort or irritation. (Advisory: Respirators and filters purchased after June 10, 1998 must be certified under 42 CFR 84.)

##### Ventilation

Use local exhaust or general dilution ventilation to control exposure within applicable limits.

##### Eye Protection

Safety glasses with side shields should be worn as minimum protection. In extremely dusty environments and unpredictable environments wear unvented or indirectly vented goggles to avoid eye irritation or injury. Contact lenses should not be worn when working with products which may generate airborne dust.

**Carcinogenicity** In June 2003, SCOEL (the EU Scientific Committee on Occupational Exposure Limits) concluded that the main effect in humans of the inhalation of respirable crystalline silica dust is silicosis. "There is sufficient information to conclude that the relative risk of lung cancer is increased in persons with silicosis (and, apparently, not in employees without silicosis exposed to silica dust in quarries and in the ceramic industry). Therefore, preventing the onset of silicosis will also reduce the cancer risk..." (SCOEL SUM Doc 94-final, June 2003) According to the current state of the art, worker protection against silicosis can be consistently assured by respecting the existing regulatory occupational exposure limits. Occupational exposure to respirable dust and respirable crystalline silica should be monitored and controlled.

<b>Chronic effects</b>	<p>In 1997, IARC (the International Agency for Research on Cancer) concluded that crystalline silica inhaled from occupational sources can cause lung cancer in humans. However in making the overall evaluation, IARC noted that "carcinogenicity was not detected in all industrial circumstances studied. Carcinogenicity may be dependent on inherent characteristics of the crystalline silica or on external factors affecting its biological activity or distribution of its polymorphs." ## 2.3. Other hazards

Cement/binding agent does not meet the criteria for PBT or vPvB in accordance with Annex XIII of the REACH Regulation (EC) No 1907/2006.

Product contains chromate reducing agent. Therefore, the cement/binder contains less than 0.0002% of water-soluble Chromium(VI). If the storage conditions are not appropriate (exposure to humidity) or the storage period is exceeded, the effectiveness of the present reducing agent can be diminished prematurely, and the cement/binder can become skin sensitizing (H317 or EUH203, respectively).

## SECTION 3: Composition/information on ingredients

### 3.1. Substances

Not applicable, as these products are mixtures, not substances.

### 3.2. Mixtures

Cement/standard cements according to DIN EN 197 and DIN 1164.

## SECTION 4: First aid measures

### 4.1. Description of first aid measures

#### *General notes*

No special personal protective equipment is required for first aiders. First aiders should, however, avoid contact with wet cement/binding agents.

#### *Following eye contact*

Do not rub eyes dry, because mechanical stress may cause additional damage to the cornea. Where applicable, remove contact lenses and immediately rinse the eye, while open, under running water for at least 20 minutes in order to remove all particles. If possible, use isotonic eye-cleansing solution (0.9 % NaCl). Always consult an occupational physician or ophthalmologist.

#### *Following skin contact*

Remove dry cement/binding agent and rinse abundantly with water. Rinse wet cement/binding agent with plenty of water. Remove contaminated clothing, footwear, watches, etc. and clean these thoroughly before re-using them. Seek medical treatment in all cases of irritation or burns.

#### *Following inhalation*

Seek fresh air. Dust should quickly be removed from throat and nose. Consult a physician, should symptoms such as discomfort, coughing or persistent irritation occur.

## ***Following ingestion***

Do not induce vomiting. If the person is conscious, wash out mouth with water and give plenty of water to drink. Get immediate medical attention or contact the poison control center.

## **4.2. Most important symptoms and effects, both acute and delayed**

**Eyes:** Eye contact with cement/binding agent (dry or wet) may cause serious and potentially irreversible eye damage.

**Skin:** Sustained contact with cement/binding agents may cause irritation on damp skin (due to sweating or humidity).

Contact of cement/binding agents with damp skin may cause skin irritation, dermatitis or severe skin damage.

*For more details see reference (1).*

**Inhalation:** Repeated inhalation of large amounts of cement/binding agent dust over a long period of time increases the risk of developing lung diseases.

**Environment:** Under normal use, cement/binding agents are not hazardous to the environment.

## **4.3. Indication of any immediate medical attention and special treatment needed**

When contacting a physician, take this safety data sheet with you.

---

## **SECTION 5: Firefighting measures**

### **5.1. Extinguishing media**

Cement/binding agents are not flammable.

### **5.2. Special hazards arising from the substance or mixture**

Cement/binding agents are non-combustible and non-explosive, and will not facilitate or sustain the combustion of other materials.

### **5.3. Advice for firefighters**

No special measures are required, as cement/binding agents do not pose any fire-related hazards.

---

## **SECTION 6: Accidental release measures**

### **6.1. Personal precautions, protective equipment and emergency procedures**

#### **6.1.1 For non-emergency personnel**

Wear protective equipment as described in Section 8. Follow the advice for safe handling and use given in Section 7.

#### **6.1.2 For emergency responders**

Emergency action plans are not required.

However, respiratory protection is needed in situations with high dust levels.

### **6.2. Environmental precautions**

Cement/binding agents should not penetrate the sewage water system, surface water or groundwater.

### 6.3. Methods and material for containment and cleaning up

Absorb spilled cement/binding agent and reuse, if possible.

Where possible, use dry methods to clean, such as vacuum exhaust (portable devices with highly efficient filter systems (EPA and HEPA filters, EN 1822-1:2009) or equivalent techniques), which do not generate dust formation. Never use compressed air for cleaning.

If dust is formed applying a dry cleaning method, personal protective equipment must be used.

Avoid inhalation of cement/binding agent dust and skin contact. Place spilled material into a container for potential subsequent use.

### 6.4. Reference to other sections

See Sections 8 and 13 for further details.

---

## SECTION 7: Handling and storage

### 7.1. Precautions for safe handling

#### 7.1.1 Protective measures

Follow the recommendations as given in Section 8.

To clean up dry cement/binding agent, see Subsection 6.3.

#### ***Measures to prevent fire***

Not applicable.

#### ***Measures to prevent aerosol and dust generation***

Do not sweep. Where possible, use dry methods for cleaning, such as vacuum exhaust, which do not generate dust formation.

#### ***Measures to protect the environment***

No special measures required.

#### 7.1.2 Advice on general occupational hygiene

Do not eat, drink or smoke when working. Wear dust respirator and protective goggles in dusty environment. Use protective gloves to avoid skin contact.

### 7.2. Conditions for safe storage, including any incompatibilities

Cement/binding agents should be stored under dry (minimizing internal condensation), water-protected conditions, clean and protected from contamination.

Do not enter storage areas for cement/binding agents such as silos, tanks, silo vehicles or other containers without suitable safety measures, because there is a danger of being buried and suffocated. In such confined spaces, cement/binding agent can form walls and bridges, which can, however, collapse or fall unexpectedly.

Do not use aluminum containers due to incompatibility of the materials.

For cement/binding agents containing Chromium(VI) reducing agents (see Section 15), please note that the effectiveness of the reducing agent decreases over time. Therefore, cement/binding agent bags and/or delivery documents include information on the packing date, the storage conditions and the storage period appropriate to maintain the activity of the reducing agent, keeping the content of water-soluble Chromium(VI) below 0.0002% of the total dry weight of the cement ready for use (determination according to EN 196-10). The manufacturer's instructions on proper storage must be followed. As a result of inappropriate storage (ingress of moisture) or expiration, the contained chromate reducers can lose their effectiveness, and a sensitizing effect of cement/binding agents upon skin contact cannot be excluded (see Section 2.3).

## SECTION 8: Exposure controls/personal protection

### 8.1. Control parameters

Type of Evaluation Value	Evaluation Value	Peak Limitation	Source	Monitoring Procedure, e.g.
<b>General Dust Limit Value</b>				
Maximum Allowable Concentration	8 h 1.25 mg/m <sup>3</sup> (R) 10 mg/m <sup>3</sup> (I)	2 (II) 15 min	20 (I) TRGS 900	TRGS 402

### 8.2. Exposure controls

To comply with occupational exposure limits, combinations of technical and/or individual protective measures are often required. If no adequate workplace measurements are available for exposure, an exposure assessment and selection of appropriate protective measures based on the MEASE tool (Reference 3) may be carried out. Engineering controls (Table in 8.2.1) and individual protective measures (Table in 8.2.2) are recommended for the identified uses in the professional sector (Subsection 16.3). In this context, option A can only be combined with A, and B can only be combined with B. Furthermore, it must be taken into consideration that the indications apply to a continuous exposure of 8 hours per day and 5 days per week.

For the private end consumer applies that the products shall only be used outdoors or in well-ventilated rooms and that personal protective equipment shall be worn (general indications in Subsection 8.2.2).

## 8.2.2 Individual protection measures, such as personal protective equipment

**General information:** Do not eat, drink or smoke when working. Wash hands and if necessary shower before breaks and after work to remove adherent cement/binding agent. Avoid contact with eyes and skin. After working with cement/binding agent, workers should wash or shower and use skin care products. Clean contaminated clothing, footwear, watches, etc. thoroughly before re-using them.

### Eye/face protection

Use tight-fitting safety goggles according to EN 166 where dust is formed or in case of risk of spilling.

### Skin protection

Wear waterproof, abrasion and alkali-resistant gloves. Leather gloves are not suitable due to their water penetrability, and can release chromate-containing compounds. For handling cement/binders, special gloves for chemicals (Cat. III) are not required. Investigations have proven that nitrile impregnated cotton gloves (layer thickness of about 0.15 mm) provide sufficient protection over a period of 480 minutes. Change soaked gloves. Have spare gloves ready.

General information about skin protection can be found in the rule BGR/GUV-R 195 of the German Accident Prevention & Insurance Association.

Wear tight footwear and long-sleeved clothing. If contact with moist cement/binder cannot be avoided, protective clothing should also be waterproof. Take care that no moist cement/binder is running in shoes or boots from above. Observe skin protection plan. Apply skin care products, in particular after work.

### Respiratory protection

Use adequate respirator masks when there is a risk that exposure limit values are exceeded (e.g. during open handling of dry powder products).

**Mixing and transferring dry cement/binder in open systems, e.g. manual mixing of cement paste or cement mortar, transferring bagged products to batch**

**mixers:** If compliance with maximum allowable concentrations cannot be guaranteed by dust-limiting measures, e.g. local exhaust ventilation, particle-filtering half-masks of the type FFP (according to EN 149) must be used (see table).

General information can be found in the rule BGR/GUV-R 190 of the German Accident Prevention & Insurance Association.

An instruction of employees on the appropriate application of the personal protection equipment is essential in order to guarantee the required effectiveness.

### 8.2.3 Environmental exposure controls

**Air:** Compliance with dust emission limit values in accordance with the Technical Instructions on Air Quality.

**Water:** Do not discharge cement/binding agents into groundwater or wastewater systems in larger quantities. An increase in pH value is possible through exposure. At a pH value above 9, ecotoxicological effects may occur. Water directed or drained off into the wastewater system or surface water should therefore not lead to such a relevant pH value. Wastewater and groundwater regulations must be observed.

**Soil:** Compliance with the German Federal Soil Protection Act and the German Federal Soil Protection and Contamination Ordinance. No special control measures required.

## SECTION 10: Stability and Reactivity

### 10.1. Reactivity

Cement/binding agent is a hydraulic material. When mixed with water, an intended reaction takes place. As a result, cement hardens and forms a solid mass, which does not react with its environment.

### 10.2. Chemical stability

Cement/binding agent is stable, as long as it is properly stored (see Section 7). It should be kept dry. Contact with incompatible materials should be avoided. Wet cement/binding agent is alkaline and incompatible with acids, ammonium salts, aluminum and other base metals. Here, hydrogen can be formed. Cement/binding agent dissolves in hydrofluoric acid, forming corrosive silicon tetrafluoride gas. Avoid contact with these incompatible materials.

With water, cement/binding agent forms calcium silicate hydrates, calcium aluminate hydrates and calcium hydroxide.

The calcium silicates of the cement/binding agent may react with strongly oxidizing agents such as fluorides.

### 10.3. Possibility of hazardous reactions

Not applicable.

### 10.4. Conditions to avoid

Moisture during storage can lead to lumping and loss of product quality.

### 10.5. Incompatible materials

Acids, ammonium salts, aluminum or other base metals.

### 10.6. Hazardous decomposition products

Cement/binding agent does not decompose into hazardous components.

## SECTION 11: Toxicological information

### 11.1. Information on toxicological effects

Hazard Class	Cat.	Effect	Reference
Acute toxicity – dermal	-	Limit test, rabbit, 24 hour exposure, 2,000 mg/kg body weight – no lethality Based on available data, the classification criteria are not fulfilled.	(4)
Acute toxicity – inhalation	-	Limit test, rat, with 5 g/m <sup>3</sup> , no acute toxicity. Study was conducted with Portland cement clinker, the main component of cement. Based on available data, the classification criteria are not fulfilled.	(10)
Acute toxicity – oral	-	No acute oral toxicity was found in animal studies with cement kiln dusts and cement dusts. Based on available data, the classification criteria are not fulfilled.	Literature survey
Skin corrosion/irritation	2	Cement has an irritating effect on skin and mucous membranes. Dry cement in contact with moist skin or skin in contact with damp or wet cement can lead to various irritating and inflammatory skin reactions, e.g. redness and chaps. Prolonged contact in combination with mechanical abrasion may cause severe skin damages.	(4) and human experience

Hazard Class	Cat.	Effect	Reference
Serious eye damage/irritation	1	In the in vitro test, Portland cement clinker (the main component of cement) showed varying degrees of impact on the cornea. The calculated "irritation index" was 128. Direct contact with cement can lead to cornea damage, due to either an immediate or delayed irritation or inflammation, or the mechanical stress. Direct contact with large amounts of dry cement or splashes of wet cement may have effects ranging from moderate eye irritation (e.g. conjunctivitis or blepharitis) to serious eye damage and blindness.	(11), (12) and human experience
Skin sensitization	1B	Some individuals may develop eczema after contact with wet cement. This is triggered either by pH value (irritant contact dermatitis) or by immunological reactions with water-soluble Chromium(VI) (allergic contact dermatitis).	(5), (13)
Respiratory sensitization	-	There is no indication of respiratory sensitization. Based on available data, the classification criteria are not fulfilled.	(1)
Germ cell mutagenicity	-	No indication of germ cell mutagenicity. Based on available data, the classification criteria are not fulfilled.	(14), (15)
Carcinogenicity	-	A causal relationship between cement exposure and cancer has not been determined. Epidemiological studies were not indicative of an association between exposure to cement and cancer. Portland cement is not classified as a human carcinogen according to ACGIH A4: "Agents causing concern that they could be carcinogenic for humans, but cannot be assessed conclusively because of a lack of data. In vitro tests or animal experiments do not provide sufficient evidence of carcinogenicity to assign this substance to another classification." Portland cement contains more than 90% Portland cement clinker. Based on available data, the classification criteria are not fulfilled.	(1)  (16)
Reproductive toxicity	-	Based on available data, the classification criteria are not fulfilled.	No evidence from human experience.
Specific target organ toxicity (STOT) – single exposure	3	Cement dust exposure can lead to irritation of the respiratory system (throat, neck, lungs). Coughing, sneezing, and shortness of breath can be the result if the exposure is above the occupational exposure limit. Occupational exposure to cement dust can lead to impairment of respiratory functions. However, currently there is insufficient evidence to deduce a dose-effect relationship.	(1)
Specific target organ toxicity (STOT) – repeated exposure	-	Long-term exposure to respirable cement dust above the occupational exposure limit may cause coughing, shortness of breath and chronic obstructive changes in the respiratory tract. No chronic effects have been observed at low concentrations. Based on available data, the classification criteria are not fulfilled.	(17)
Aspiration hazard	-	Not applicable, as cement/binder is not available as an aerosol.	

Cements (common cements)/binding agents and Portland cement clinkers have the same toxicological and ecotoxicological properties.

## ***Medical conditions aggravated by exposure***

Cement/binding agent may aggravate existing skin, eye and respiratory tract diseases, for example emphysema or asthma.

## **SECTION 12: Ecological information**

### **12.1. Toxicity**

Cement/binding agents are not considered hazardous to the environment. Ecotoxicological studies with Portland cement on *Daphnia magna* (U.S. EPA, 1994a) [Reference (6)] and *Selenastrum coli* (U.S. EPA, 1993) [Reference (7)] have shown little toxicological impact. Therefore, LC50 and EC50 values could not be determined [Reference (8)]. No toxic effects on sediments were determined either [Reference (9)]. The release of large amounts of cement in water can, however, lead to rise in pH and thus be toxic for aquatic life under certain circumstances.

### **12.2. Persistence and degradability**

Not applicable, as cement/binding agent is an inorganic mineral material. After hydration, residual cement/binding agents present no toxicological risk.

### **12.3. Bioaccumulative potential**

Not applicable, as cement/binding agent is an inorganic mineral material. After hydration, residual cement/binding agents present no toxicological risk.

### **12.4. Mobility in soil**

Not applicable, as cement/binding agent is an inorganic mineral material. After hydration, residual cement/binding agents present no toxicological risk.

### **12.5. Results of PBT and vPvB assessment**

Not applicable, as cement/binding agent is an inorganic mineral material. After hydration, residual cement/binding agents present no toxicological risk.

### **12.6. Other adverse effects**

Not applicable.

## **SECTION 13: Disposal considerations**

### **13.1. Waste treatment methods**

Restrictions on use:

According to Annex XVII Paragraph 47 of EC Regulation 1907/2006 (REACH), the marketing and use of cements and cement-containing preparations is subject to restriction:

1. Cement and cement-containing mixtures shall not be used or placed on the market if they contain, when hydrated, more than 0.0002% soluble Chromium(VI) of the total dry weight of the cement.
2. If reducing agents are used, then, without prejudice to the application of other Community provisions on the classification, packaging and labeling of dangerous substances and mixtures, suppliers shall ensure, before placing on the market, that the labeling of cement and cement-containing mixtures is clearly readable and durably indicating when the product was packaged and under what conditions and for how long it can be stored without the effect of the reducing agent decreasing and the content of soluble Chromium(VI) exceeding the limit value specified in Number 1.
3. By way of derogation, Numbers 1 and 2 shall not apply to the placing on the market with regard to well-controlled, closed and fully automated processes, and to use in processes, in which cement and cement-containing mixtures are handled solely by machines and in which there is no possibility of contact with the skin.
4. The standard, which has been adopted by the European Committee for Standardization (CEN) for the determination of the content of water-soluble Chromium(VI) of cement and cement-containing mixtures, has to be applied as the procedure to provide evidence of compliance with Number 1.

Within the scope of the "Agreement on Workers' Health Protection through the Good Handling and Use of Crystalline Silica and Products containing it", manufacturers of cement have committed themselves to implement "Best Practices" for safe handling (<http://www.nepsi.eu/good-practice-guide.aspx>).
